

Class exercise 4-6

User registration form data validation

Design a sign up form html page as follow page and do form data validation with JavaScript. Form data validation tasks include

- (1) Empty validation: all the form fields are not empty;
- (2) Password length validation: we require that password length is larger than 8)
- (3) Confirmed password validation: password and confirmed password are identical;
- (4) Mobile phone number validation: it is a correct mobile phone number;
- (5) Birthday validation: it is a correct date;
- (6) Email validation: it is a correct email.
